SEED ANNUAL

for 1933

To Our Friends and Customers:

We take this opportunity to express our sincere appreciation and thanks for your liberal patronage and friendly cooperation. We trust that our service has been satisfactory and that you will again send us your orders for seeds and any other products we handle.

We aim to have the best obtainable stocks from this country, with a few high grade specialties from abroad. Seeds are mostly sold on confidence and our steady growth over a period of 19 years indicates that through our choice of good stocks we have fulfilled the trust our customers have placed in us.

This year, again, the prices have been reduced considerably, although price should be one of the smallest items considered when buying seeds.

Any order or inquiry you send us will receive prompt, careful, and courteous attention.

Respectfully,

DANISH SEED IMPORT,

Chris Moberg.

TERMS NET CASH

All prices subject to changes and to being unsold.

On larger orders kindly ask for special quotations.

Delivery charges will be paid by us for all seeds except Peas, Beans, Corn, Bird Seed and Lawn Seed.

We give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods you send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned. Examine seeds closely, test if desired, and if anything is wrong, the seed will be replaced or money refunded.

DANISH SEED IMPORT,

Chris Moberg.

VEGETABLE SEEDS

ASPARAGUS

		Oz.	¼ Lb.	Lb.
10	WashingtonPkt. 5c	\$0.15	\$0.40	\$1.50
	Very large stems, rustproof, grows very rapidly and can be used partly 2 to 3 years after seeding.			
14	Washington Plants			
	We recommend to plant 1-year-old plants of this variety, and offer strong plants for \$10.00 per 1,000—\$1.50 per 100—and 40c for 25 plants.			
	<i>Sow the seeds thinly, in rows, in the early spring, and dig up and plant in permanent bed the following early spring. Set the plants not closer than 15 in. apart in trenches with the tip of the plant 6 to 8 in. below the surface of the ground, spreading the roots out evenly in all directions.</i>			

BEANS—YELLOW PODDED BUSH

Sow the beans in rows leaving at least a 15 in. space between the rows, and either drop the seeds separately 2 or 3 in. apart, or drop 3 or 4 seeds in hills about 18 in. apart.

95	Italian Green Sprouting10	.50	1.50
	Early maturing, very tender.			

BRUSSELS SPROUTS

Sow the seed in early spring and when plants are large enough, transplant to permanent place, setting the plants about 18 inches apart.

98	Odense Market05	.25
	Half tall with firm sprouts setting close on the stalk.			
99	Long Island Improved05	.30
	Very short early variety.			

CABBAGE

Nearly all our Cabbage Seeds are grown in Denmark and will give good satisfaction in almost any climate. For the earliest crop, sow the seed very early and have good plants hardened and ready to set out in the field in April. For late Cabbage in this vicinity, the seed should be sown in first half of May and the plants set out the last half of June in rows 2 to 3 feet apart and the plants about 2 feet apart.

		Pkt.	Oz.	¼ Lb.	Lb.
105	Early Jersey Wakefield Very early, pointed heads.	.05	.20	.60	2.00
108	Golden Acre Very early, round solid heads. Ready a few days later than the pointed variety.	.05	.30	1.00	3.50
109	Extra Early Summer Ballhead Round, very early, under some conditions earlier than Golden Acre.	.05	.30	1.00	3.50
110	Earliest of All Very early, round solid heads.	.05	.25	.80	3.00
112	Copenhagen Market Very early, large, round, solid heads. If planted late, it makes an excellent Kraut cabbage.	.05	.25	.80	3.00
114	Babyhead Hartman's original, small heads, very early. Good for the North.	.10	.35	1.25
116	Glory of Enkhuizen Best variety for Mid-season. Can be planted closer together as it has few and smaller outer leaves. Will keep fairly well during December.	.05	.20	.60	2.00
118	Flat Dutch or Brunswick Improved Large, flat heads, not very hard and not a good keeper.	.05	.20	.60	2.00
121	Danish Ballhead Amager, Medium Stem Round-headed, half short stem, very good keeper. Heads uniform, very hard and heavy, not very large. Our recommendation as the best late cabbage for general use.	.05	.20	.75	2.40
123	Danish Ballhead Hunderup Tall-stem Latest and best keeping cabbage, heads round or balloon shaped. For best result, this variety should be planted two weeks earlier than the short-stemmed variety.	.05	.25	.80	3.00
126	Wisconsin Hollander Yellow-resisting strain, has large leaves but will do on yellow infested soil.	.05	.25	.80	3.00
128	Bugner Winter Late, large round heads, good keeper, yellow resistant.	.05	.25	.80	3.00
131	Hollander Ferry's strain. Preferred by some growers instead of the Danish strain.	.10	.40	1.25	4.00
132	Penn State Ballhead Grown by Lupton's and developed by Division of Plant Breeding of Pennsylvania State College. Slightly flat heads. Sold in sealed packages.40	1.50

RED CABBAGE

140	Haco Earliest, round solid heads, not a good keeper.	.05	.35	1.00
141	Amager Giant Very large, round, solid heads. Should be planted out early for best results.	.10	.75
142	Mammoth Large Red Large, medium early.	.05	.25	.90
143	Danish Stonehead Best variety for late use, keeps well.	.05	.25	.90

SAVOY CABBAGE

150	Vertus Rather loose heads, leaves curled or crimped, most tender and sweet cabbage. Does not keep well.	.05	.25
-----	---	-----	-----	-------	-------

CHINESE CABBAGE

Also called Celery Cabbage, as it has no resemblance to cabbage except in the flavor. It grows upright with long or oblong loose heads, like Cos Lettuce. The seeds should be sown in late spring or early summer and the plants thinned out to at least a foot apart. Heads appear latter part of the summer.

	Pkt.	Oz.	$\frac{1}{4}$ Lb.	Lb.
155 Chihli05	.30	1.00
Very early and gives the highest percentage of fairly solid and long heads.				
156 Pe-Tsai05	.25	.80
Long-headed variety.				
157 Wam-Bock05	.25	.80
Short, thick heads.				

CARROTS

Sow in rows at least 10 inches apart and thin out when large enough. Varieties with large tops should be thinned out to about 3 inches apart and the small-topped varieties to 1½ to 2 inches. Carrots should not have fresh fertilizer. Does best in light soil which has been richly fertilized for a crop the preceding year.

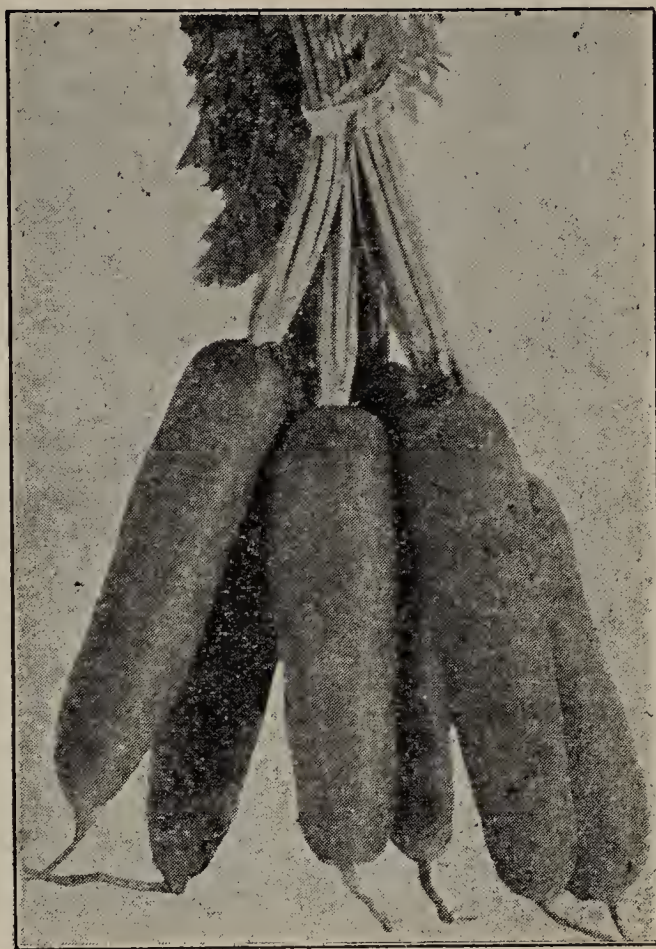

162 Delicacy05	.25	.80
Early, very tender and sweet. Attains the size of a little finger when ready to use. Short topped.				
163 Amsterdam05	.20	.60	2.00
Short topped, very early, cylindrical, turns orange-red when about ½ inch thick. A high quality carrot, but not very large.				
164 Butter05	.20	.60
Half long, early, very sweet, short topped.				
166 Oxheart05	.10	.25	.90
Early, short and thick. Should be used before they get too large. Good quality.				
169 Nantes Improved05	.15	.35	1.25
Coreless cylindrical shaped, deep orange-red, very sweet and tender, early, short tops. One of the best carrots for home use.				
172 Chantenay05	.10	.25	.90
Most popular Market Carrot. Early, half long, blunt rooted, deep orange flesh, tops large.				
173 Red Cored Chantenay05	.10	.35	1.25
Red core, shorter top and sweeter than the ordinary Chantenay.				
175 Danvers Half Long05	.10	.30	1.00
Medium early, half long, good quality.				
178 Amager05	.20	.60	2.00
Large Nantes type, deep orange-red, very sweet and a good keeper.				
180 James Half Long05	.10	.30	1.00
Dark red, long pointed roots, large, very good for Winter use.				
183 Yellow Champion Giant10	.25	.80
Very large yellow Fodder carrot. Does well in poor sandy soil.				
184 White Belgian Giant10	.25	.80
Very large, White Fodder Carrot. Requires better soil than the yellow variety.				

CHICORY

205 Brusseler Witloof05	.30	1.00
Select Strain.				
<i>Also called French Endive. Seeded in May and in the Fall the roots are dug up, planted again in a dark warm basement or like place in boxes, kept moist, and the fresh leaves or sprouts which then grow up during the Winter months are used for salads.</i>				

CARROT CHANTENAY

CARROT NANTES IMPROVED

CAULIFLOWER EARLY DANISH SNOWBALL

CAULIFLOWER

For early Canliflower, the seed should be started very early in the spring, so the plants can be strong and hardened and ready to set out in April. For late use the seed can be planted in the middle of May and the plants set out the latter half of June. We recommend to treat the bed with Semesan or Formaldehyde Dust before seeding, as the small plants are apt to damp off.

		Pkt.	Oz.	¼ Lb.	Lb.
190	Early Danish Snowball Our most popular variety. It is very early but equally good for late planting.	.25	1.75	6.00	21.00
191	Early Erfurt Dwarf About a week later than Snowball. Leaves a little taller and the heads more flat.	.25	1.75	6.00	21.00
192	Dry Weather or Danish Giant Taller and later than Erfurt, has more leaves and rounder heads. Extra good for late planting as the heavy foliage is a protection against hot weather.	.25	1.75	6.00	21.00
195	Madsen's Super Snowball A uniformly headed strain of Snowball, desirable where a large quantity is required at one time.	.25	2.50	8.00
196	Catskill Snowball A good strain, maturing in between Snowball and Erfurt.	.25	1.75	6.00	21.00
199	Snowdrift New variety from Holland. Large Snow white heads.	.25	2.00	7.00
200	Autumn Giant Late, very tall. Requires a long season to mature. Not dependable in this vicinity.	.05	.30	1.00

CELERY

For early celery the seed can be planted in early March, under glass, and the plants set out when no more heavy frost is expected. For late celery seed can be sown outside in May and have strong plants ready by the middle of June. The best soil for celery is well cultivated and well powdered peat soil. The plants can be planted 6 to 9 inches apart in single rows about 2 feet or more apart, or can be planted in double rows 6 to 9 inches apart and 2-3 feet between each double row. Bleaching should be started at least 2 weeks before harvest, and can be done with a wide board, special paper, or the soil can be hilled up around the plants. An ounce of seed should produce from 5,000 to 10,000 plants.

210	Paris Golden Yellow Self-blanching Tall, very fast grower, golden yellow heart, stalks thick, broad and crisp, with a fine nut-like flavor. Imported French Seed.	.25	1.20	4.00	12.00
211	Paris Golden Yellow Self-blanching American grown seed, extra good strain.	.10	.60	2.00	7.00
212	Golden Yellow Self-blanching The old original short variety, less stringy and better for late use, as the heart is more full. Imported French seed.	.25	1.00	3.50	11.00
213	Golden Self-blanching Extra good strain of American grown seed.	.10	.50	1.50	5.00
215	Golden Plume Heavy, strong growing American variety. Very good for shipping.	.10	.50	1.50	5.00
217	Golden Phenomenal An improved Golden Plume. More disease resisting, taller and heavier.	.25	1.00	3.50
218	Giant Pascal One of the finest flavored variety of Celery. Grows compact but vigorous. When bleached is yellowish white.	.05	.30	1.00
219	Fordhook Emperor Good late variety. Center is white with a tinge of yellow. Short, thick plants.	.10	.50	1.50

CELERY—Continued

		Pkt.	Oz.	¼ Lb.	Lb.
220	Easy Blanching Fairly large, late, green, bleaches to clear white. Good quality and good keeper.	.05	.30	1.00
221	White Plume Early white variety.	.05	.25	.80

CELERICAC OR ROOT CELERY

Seed should be started under glass in March, and the plants set out in rich, fairly moist ground in late May. Set the plants about 1½ feet apart.

225	Prague Giant Large smooth roots with clear white flesh.	.05	.25	.80
-----	---	-----	-----	-----	-------

CUCUMBER

Out doors, cucumber can be seeded in rows 3-4 feet or more apart and the seed dropped 3-4 inches apart, an inch below the surface of the ground, or the seed can be planted in hills about 4 feet apart and 8-10 seeds to each hill. A good method where the soil is not very rich, is to dig a trench and fill in some fresh manure and then at least 6 inches of soil between the manure and the seed.

230	Hunderup Forcing. Extra good Greenhouse variety, English type, grows up to 24 inches long, smooth, slim cucumber. Seedless if insects are kept away. Has a very fine flavor, heavy producer. Not recommended for out-door planting. 10 seeds, 20c—100 seeds \$1.50.				
231	Tottenham. Not quite so prolific, and not as long as the Hunderup, but otherwise the same type. 10 seeds 15c—100 seeds \$1.25.				
235	315—100 seeds \$1.00—\$5.00 per ounce. Smooth, dark green, grows 9-10 inches long, blunt ends. Stays green a long time. Extra good for Greenhouse, but can be used in Frames and outdoors. American greenhouse grown seed.				
236	316 Same as above but seeds grown outside.	.10	.50	1.50	5.00
237	Longfellow Dark green, uniform, straight, averaging 12-14 in. long by 2½ in. Good for either outdoor or for indoor culture.	.05	.20	.60	2.00
238	Clark's Special Good slicing cucumber. 8-10 inches long, dark green. Recommended for Hot Beds, Greenhouse or outdoors.	.05	.20	.60	2.00
241	Danish Pickle or Asie Large, light green, heavy producer, fine quality, very small or fine spines.	.05	.20	.60	2.00
243	Davis Perfect Long, dark green, stays green a long time after picking, very good but not so prolific as some of the other varieties.	.05	.15	.35	1.25
245	Early Fortune Slightly shorter than Davis Perfect, but much more prolific. Can be used either for slicing or pickling.	.05	.10	.30	1.00
246	Improved Early White Spine Early, prolific, popular variety.	.05	.10	.30	1.00
247	Evergreen White Spine Long, cylindrical shaped, dark green, medium early.	.05	.10	.30	1.00
250	Improved Long Green Good for late use and for ripe pickling. Good producer.	.05	.10	.30	1.00
252	Chicago Pickling Very heavy producer and used mostly for Dill Pickling or small sweet pickles.	.05	.10	.30	1.00
254	Snow's Pickling For small pickling. Has square ends which makes easy packing in preserve jars.	.05	.10	.30	1.00

EGG PLANT

Should be seeded under glass in March and the plants set out when all danger of frost is over.

	Pkt.	Oz.	$\frac{1}{4}$ Lb.	Lb.
256 Black Beauty10	.50	1.50
Large, purple-black fruit, good bearer, early.

Medium long, thick shoulder.				
512 Intermediate05	.15	.30	1.00
Half long, short top.				

PEAS

Smooth seeded varieties can be planted very early. The wrinkled varieties are apt to rot if the weather turns wet and cold before they germinate. The short vined does not require anything to climb on, but to get the full benefit of the taller and later kinds, they should have a trellis of some kind to climb on.

TOMATO

One method to grow early Tomatoes is to plant strong, healthy plants of a good early variety, about 1½ feet apart, in rows about 3 feet apart, then, at the same time set along side each plant a fairly heavy stake. A Tonkin cane, 5 ft. long and ½ to ¾ inch thick is good. As the plant grows, the main or center stem should be tied loosely with Raffia to the stake and all side-shoots or suckers trimmed off. When 5 or 6 flower clusters are set, the top of the plant should also be taken off, but one leaf must be left over the top flower. That way there will not be so many Tomatoes on the plants, as when letting it grow its own way, but the tomatoes will mature much earlier and the fruit will be perfect. If more than 5 or 6 clusters are wanted from a plant, the two bottom side branches can be left growing and tied on the stake, and stopped when 3 clusters are set. Varieties are listed as to their earliness, the earliest first.

<i>Sow Asters under glass in late March and have plants ready to set out in late May. Or sow seeds in open ground after the middle of May.</i>			

Wilt Resisting Asters

One of the troubles Growers have had in late years with Asters, has been the Fusarium Wilt disease, but there has been developed several strains which are immune to that. This is the cause of the stems rotting and is a disease from the soil. It turns the stems black. Starts at the ground and works up through the plant. This must not be confused with the "yellow," which is said to be transported by an insect, and from which there does not seem, as yet, to be any other prevention than to keep the insects away.

We offer the following varieties which will be resistant to the Fusarium Wilt.

The Chinensis varieties will bloom the first season if sown under glass not later than March. The other varieties can be sown in May or June and transplanted as soon as large enough. Should give good satisfaction the following Summer. Cardinale, Nudicaule and Sulphureum are very doubtful for wintering over in this vicinity, but farther south they should be hardy. The Blackmore and Langdon strain, Selecta and Wrexham, are especially recommended as the best to be had in Hardy Delphinium. For annual Delphinium see Larkspur.

The culture of Petunias are very easy for the small-flowered or cheaper varieties, as these can be sown both inside and outside with a fair expectation of good results. For the large-flowered or better varieties it is more difficult to get them started. For May blooming, they should be sown in a fairly warm place in January or February, and the seeds just sprinkled on the surface of very fine sifted soil and kept moist. As soon as large enough to move, they can be transplanted and later put in pots. The seeds that produce the double flowered plants, usually are weaker than the single flowered, and in transplanting the double varieties, care should be taken with the weakest and poorest looking seedlings, as they usually produce the best double flowers.

SUGGESTIONS FOR MAKING A LAWN

In making a new lawn, the soil should be spaded very thoroughly and if any Quack-grass is present, all the roots should be picked out. The surface must be made level at the same time. After leveling, the soil should be either tramped down or rolled with a heavy roller to get the foundation firm. Seed should be broad-cast very evenly at the rate of 1 lb. of good clean seed to about 200 square feet. The seed should then be either covered with a thin layer of soil or chopped down and the soil rolled again and watered. For repairing an old lawn we recommend to scratch the sod thoroughly and deep with a rake so the dead grass can be cleared off and the surface of the soil rough, then sprinkle the seed. Now go over the lawn again with the back or smooth side of the rake to cover up as much seed as possible. Another method will be to sprinkle seed on the old lawn and then cover with at least ½-inch of finely pulverized peat moss. Can offer such Peat Moss in truck loads at a very reasonable price. Once in a while the lawn, especially an old one, should be given an application of some good plant food containing Nitrogen.
